EDUCATION

Honours Bachelor of Science, University of Toronto

Sept. 2021 – May 2025

Specialist in Computer Science, Major in Mathematics

3.96/4.0 cGPA

EXPERIENCE

Machine Learning Researcher

July 2023 – Present

BMO Lab, University of Toronto

- Worked under Prof. David Rokeby to integrate motion-capture suits and diffusion models into live performances
- Applied forward dynamics in real-time on motion-capture data using **MuJoCo**, providing joint-level control of the model and the option to extract physical data using inverse dynamics
- Used linear interpolation to smooth highly-stochastic positional data to estimate the velocities of joints over time
- Trained agents imitate real-world actions using the actor-critic algorithm and proximal policy optimization

Research Assistant

May 2023 – Present

Biological Physics Group, University of Toronto

- Worked under Prof. Anton Zilman to model receptor signalling via soluble ligands with a high degree of cross-talk
- Implemented a data pre-processing pipeline that transforms highly-stochastic time series into a representative smooth spline and its integral
- Built a feed-forward network in **PyTorch** that predicts the cytokine dynamics of T-cells in response to antigens
- Showed two variables are sufficient to determine cytokine concentrations (as predicted by theoretical work) because the model predicted the correct outputs with an ℓ_2 error of 0.1% using two hidden variables in the final layer

Research Student

May 2022 – Sept. 2022

Physics Education Group, University of Toronto

- Worked with Prof. Carolyn Sealfon to develop suggestion extraction models for feedback from physics courses
- Produced a dataset of ~11 000 sentences from student feedback which labels whether they contain suggestions
- Compared the effectiveness of statistical and deep-learning classifiers at extracting suggestions using **scikit-learn** and **TensorFlow** respectively
- Trained the models using **TensorFlow** and **scikit-learn** with a Bayesian hyperparameter optimizer
- Demonstrated the efficacy of a BERT classifier at addressing this problem with it achieving an F_1 score of 0.823

PROJECTS

MNIST-to-EMNIST Domain Adaption

Sept. 2023 – Dec. 2023

- Worked with Joaquin Sanchez-Garcia on applying the theory of optimal transport to domain adaption within the context of image classification.
- Used **Python Optimal Transport** to compute various functions which transform the EMNIST dataset of handwritten digits such that its distribution and priors match those of the MNIST dataset.
- Found that the accuracy of a fully-connected feed-forward classifier trained on the MNIST dataset was improved from 17% to 73% on the EMNIST dataset, demonstrating its usefulness.

Student Response Classifier

Mar. 2023 – Apr. 2023

- Developed a 3-parameter logistic item response theory classifier in **PyTorch**, using alternating gradient descent for training, to predict the correctness of student answers to multiple-choice questions
- Obtained an accuracy of 72% on the *NeurIPS 2020 Education Challenge* dataset (within 5% of the best solution)

MNIST Classifier

Dec. 2022 – Jan. 2023

- Implemented the softmax classifier from “Understanding Machine Learning – from Theory to Algorithms” with stochastic gradient descent using **C++** and the linear algebra library **Eigen3**
- Achieved 92% accuracy on the MNIST dataset of handwritten digits (within 2% of the top classifier using SGD)
- Included the ability to save trained weights, perform batch training, and track the training error in real-time

Image Restoration with Convolutional Neural Networks

Sept. 2020 – June 2021

- Combined the models RIDNet and DeepDeblur using **PyTorch** to determine the ability of convolutional neural networks to deblur and denoise images
- Artificially generated a dataset of ~5 000 noisy, blurred images using a Poisson-Gaussian noise model
- Discovered that integrating the two models offers marginal improvements over their individual performance

TECHNICAL SKILLS

Languages	C, C++, Rust, Python, Java
Frameworks	PyTorch, TensorFlow, scikit-learn, NumPy, Pandas, SciPy, Matplotlib, MuJoCo, Eigen3
Tools	Git, shell, ssh, Unix, CMake, Anaconda, Google Colab, Jupyter, WSL, Slurm

STUDENT LEADERSHIP

Director of Internal Relations	Apr. 2023 – Present
<i>Computer Science Student Union, University of Toronto</i>	
<ul style="list-style-type: none">Organized orientation for the ~500 undergraduate students entering the computer science (CMP1) streamPlanned 10+ events in collaboration with various partners in industry (such as AMD and Google) and student organizations (such as UTMIST ↗ and WiCS ↗)Hosted 3+ talks with professors in the Department of Computer Science at the University of Toronto	
First-Year Academic Officer	Sept. 2021 – Apr. 2022
<i>Math Union, University of Toronto</i>	
<ul style="list-style-type: none">Facilitated discussions between 20 mentor-mentee pairs in the <i>First-Year Mentorship Program</i> by providing guidance to the upper-year mentorsOrganized “Coffee and Chat” events which allowed for informal discussions between students and math professors	
Registered Study Group Leader	Sept. 2021 – April 2022
<i>Sidney Smith Commons, University of Toronto</i>	
<ul style="list-style-type: none">Led study groups for <i>Foundations of Computer Science I</i> and <i>Enriched Introduction to the Theory of Computation</i>Headed weekly meetings for first-years students that reviewed content covered in the previous week’s lectureDeveloped example problems to clarify and reinforce important concepts through group discussion	

AWARDS & SCHOLARSHIPS

Dean’s List Scholar , University of Toronto	Sept. 2021 – Present
Second Malcom Wallace Scholarship (\$4 500), University of Toronto	Sept. 2021 – Present
Louis Savlov Scholarships in Sciences And Humanities (\$500), University of Toronto	Nov. 2023
University of Toronto Scholar (\$7 500), University of Toronto	Sept. 2021
BC Achievement Scholarship (\$1 250), Government of British Columbia	Aug. 2021
District/Authority Scholarship (\$1 250), Government of British Columbia	Aug. 2021

SELECTED COURSEWORK

Code	Title	Term
CSC324	Principles of Programming Languages	Winter 2024
CSC412 [†]	Probabilistic Learning and Reasoning	Winter 2024
CSC413 [†]	Neural Networks and Deep Learning	Winter 2024
CSC473	Advanced Algorithm Design	Winter 2024
MAT357	Real Analysis I	Winter 2024
APM462	Nonlinear Optimization	Fall 2023
CSC369	Operating Systems	Fall 2023
CSC420	Introduction to Image Understanding	Fall 2023
MAT354	Complex Analysis I	Fall 2023
MAT377	Mathematical Probability	Fall 2023
MAT327	Introduction to Topology	Summer 2023
CSC373	Algorithm Design, Analysis and Complexity	Winter 2023
CSC384	Introduction to Artificial Intelligence	Winter 2023
CSC463	Computational Complexity and Computability	Fall 2022
MAT344	Introduction to Combinatorics	Summer 2022

[†]Cross-listed graduate courses
